

Dhriti, the college start-up is based on the idea of growing organic vegetation on college premises. The start-up was initiated in order to equip the students with the knowledge of organic vegetation and to make them well aware of the vegetation techniques. All the students are provided training to grow organic vegetation.

The startup aims to develop agricultural entrepreneurial skills among students by providing fresh, high-quality vegetation to a college canteen on a no-profit, no-loss basis. This saves money by eliminating dependence on market-based prices. The team, including students, gardeners, and teachers, has been successful, especially during COVID. The venture plans to expand by providing fruits and vegetables as refreshments during seminars and functions, allowing students to dispose of peels in boxes.
